Engineered to Reduce Impact Noise

Understanding Impact Noise

High heels, scampering dogs, dropped objects. Sound is transmitted when hard objects interact with hardwood floors. Without anything to absorb it, sound waves can permeate the building envelope. Suppressing that sound is incredibly important in custom residential homes, office buildings and multi-family condominiums.

Resistance to Impact Noise

Bona® Adhesives are tested in accordance with the IIC (Impact Insulation Class) standard using the measurement procedure ASTM E492-09. This standard measures the floors resistance to the transmission of impact noise, such as those mentioned above. The higher the rating the better the sound absorption. The Uniform Building Code (UBC) requires a rating of 50.

Your Guide to Choosing the Right Adhesive

<table>
