

Bona HR Technology

Fillers and base coats with extra High Resistance
for industrial use

Bona[®]

Floor areas with unusually high traffic require enhanced wear resistance that does not impair their visual impact. Bona HR is designed specifically to deliver that extra performance.

Scratches, stains, scuffing – the cumulative effects of extremely high traffic are all too familiar. With Bona HR Technology you can boost the wear resistance of floors subject to particularly high traffic. To minimize the impact of wear and aging on the floor, choose our unique HR fillers and coatings.

Bona HR creates a tough base coat that is hard, but not brittle. Thanks to carefully calibrated elasticity, it can sustain loads without cracking. And of course, Bona HR has consistent clarity to bring out the natural beauty of the wood.

When you need premium protection for high-traffic areas in domestic and commercial environments, Bona HR is the way to go.

- Increased wear resistance
- Well-balanced elasticity
- Unimpaired floor experience
