

## Bona Veneer UV

For longer-lasting, natural-looking veneers

**Bona**<sup>®</sup>

---

The very thin veneer on some wooden flooring looks good today. But what about next year? Bona Veneer transforms the prospects for these relatively vulnerable products, extending their lifetime and looks.

Some flooring products have a paper-thin veneer. They look quite similar when purchased, but the differences become apparent over time. While premium veneer is thick enough to be sanded to preserve its looks, these thinner veneers are not. You have to replace the floor or live with its deteriorated appearance.

That's why we now offer a coating specifically designed to extend the useful life of wooden floors with thin veneer. Multi-action Bona Veneer transforms the looks and useful life of thin veneers.

As a hard, highly resistant product, it extends the floor's lifetime by significantly increasing resistance to abrasion and scratching while

remaining flexible. Bona Veneer is available in grades ranging from matt to high gloss, so you can offer the precise appearance your customer wants.

- Protects against abrasion and scratches
- Enhances the floor's appearance with different gloss levels
- Extends the lifetime of thin veneer floors
- Over-coatable
- Excellent chemical resistance
