

Bona Sportive UV

Totally integrated system for pre-finishing wooden sports floors

Bona[®]

Wooden sports floors impose particularly heavy demands on the floor treatment system. We have developed Bona Sportive UV to provide the long-term strength, elasticity and wear resistance needed.

With such diverse loads in terms of weight, impact and sliding, the wooden sports floor presents a challenge. In response, our Bona Sportive UV is a complete, totally integrated system for pre-finishing wooden sports floors. It prepares them for an extended service life with enduring strength, elasticity and wear resistance.

As members of FIBA, the International Basketball Federation, we have ensured that Bona Sportive UV delivers the physical characteristics that are important in a wooden sports floor. It is suitably elastic, in the interests of safety and performance, while retaining the feel of wood. Resistant to scratching and scuffing, it retains its appearance in the long term and is also very easy to maintain. With many sports floors subject to strong ambient light, the

built-in UV resistance also protects the floor from the sun's rays.

For use in high-risk areas, Bona Sportive System can be integrated with our fire-retardant finish. It has passed EN ISO 9239-1 (Radiant Panel) and EN ISO 11925-2 (Single Flame Source) testing.

- Elasticity for enhanced performance
- Wear-resistant for a long service life
- Resists fading caused by sunlight
- Easy to maintain
- Line marking supplied by Bona Professional
